

# PHP Form Creation and Data Handling

- **Problem Statement:**

Create an HTML form that allows the user to input their name and email.

**Steps to Solve:**

- a. **Create two PHP files:** one for the form and another for handling form data.
- b. **Save both files** and test by submitting the form.
- c. **Run the form in a browser** and check if data is passed to form-handler.php.
- d. **Modify** to handle more data types.
- e.

- **Output:**
