6. Program on Applying Layout to HTML Web Page

- **Problem Statement:**

  Create a layout for a webpage using CSS Grid or Flexbox.

- **Steps to Solve:**
  a. **Create an HTML file** and use CSS to define layout sections (header, nav, content, footer).
  b. **Save the file** as layout.html.
  c. **Test in a browser** and adjust the layout using CSS properties like float and width.
  d. **Add more content** and test responsiveness.

- ## Output:
